One of the leading players in the global airport business, Fraport AG offers a wide range of operational and management solutions based on over 90 years of aviation expertise. At its Frankfurt Airport (FRA) home base, Fraport welcomed more than 69.5 million passengers and handled about 2.21 million metric tons of cargo (airfreight and airmail) in 2018. In Europe, Frankfurt Airport ranks first in terms of cargo tonnage and is the fourth busiest for passenger traffic.

FRA's Ground Services have been using at total of four ground power units of the type "7400 eGPU" from supplier ITW GSE for almost one year now. We can confirm our satisfaction with this product. Since the mobile "7400 eGPU" is battery powered, it can be flexibly deployed in different areas across the airport, even on remote aircraft stands located far away from the terminals.

In addition to its flexible use, we particularly appreciate the 7400 eGPU's environmentally friendly technology. Our ground handling crews welcome the device's low noise and emission levels during daily operations. Being familiar with the stationary 2400 GPU of the same provider, our staff could easily adapt to using the operating interface of the new eGPU.

We have deployed the eGPU primarily on Code C aircraft both during summer and winter, and therefore can confirm the product's high availability. Moreover, provider ITW GSE offers fast, uncomplicated and competent service.

Since our overall experience with the 7400 eGPU was very satisfactory, we have ordered three more devices of this type and are looking forward to their delivery at the end of this year.

Best regards
